

UKRAINIAN
WOMEN
PHOTOGRAPHERS
ORGANIZATION

Every photograph, whether it's a digital file or a print, consists of a certain number of pixels that form the objects depicted in the image. Each pixel has its own color, which ultimately contributes to the overall hue of the image, a characteristic that is intricately linked to the chosen color space.

All photographers know what a pixel is. A factor affecting the quality of a photograph is the number of pixels that make up the image. As an identity, one can relate a pixel to a photographer, so the more photographers there are in Ukrainian women's photography, the more qualitative and powerful the organization becomes. In other words, just as a photograph consists of many pixels, an organization consists of a variety of photographers.
